PRODUCT OVERVIEW · PREPARED JULY 2026

1 Executive Summary

The Cafe Management System is a single platform that runs an entire food business — from the moment a cashier rings up an order, through the kitchen, the stock room, the accounts ledger, and the payroll run at the end of the month.

Most restaurants juggle separate tools: one app for billing, spreadsheets for stock, a diary for attendance, and an accountant who re-enters everything at month-end. Every hand-off loses time and introduces errors. This system replaces all of that with **one connected platform** where a sale at the register automatically updates orders, the kitchen screen, stock levels, the general ledger, and your sales reports — with no re-typing and no reconciliation gaps.

One system, zero re-entry

A POS sale drives the kitchen ticket, deducts recipe ingredients from stock, posts to the accounting ledger, and appears in reports — automatically.

Built for multiple branches

Run every location from one dashboard: per-branch menus, stock transfers between branches, branch-level reports and targets.

Enterprise-grade navigation

Modules are organized the way your team actually works — cashier, kitchen, accountant, HR — with instant search (Ctrl+K) to jump anywhere in two keystrokes.

Trustworthy numbers

Revenue is recognized from real invoices, every stock movement is traceable, and a full audit log records who did what, when.

2 Designed Around Your Team

Each person who logs in sees only what their role needs — a cashier gets a fast, focused register; the owner gets everything. Permissions are enforced throughout the system, not just hidden in menus.

ROLE	WHAT THEY SEE AND DO
Owner	Full control: every module, all branches, user & role management, billing, branding, salary policies, audit logs, and system settings.
Branch Manager	Day-to-day operations: sales, kitchen, inventory, purchasing, finance dashboards, staff attendance and payroll, marketing tools for their scope.
Cashier / Staff	A clean, minimal workspace: the POS register, orders, kitchen display, tables, bill history, their own attendance, and team messaging — nothing to get lost in.
Kitchen	A live Kitchen Display screen and automatic printed kitchen tickets, per station (grill, bar, dessert...), the instant an order is placed.
Accountant	A dedicated Finance area: financial dashboard, double-entry accounting, receivables & payables, budgets, payment accounts and exportable reports.

Closed, secure platform. There is no public self-signup. Every account is created by the owner, can be deactivated instantly, and every sensitive action is written to a tamper-evident audit log.

3 The Complete Module Catalog

Everything below ships in the product today, organized exactly as it appears in the application's navigation.

Point of Sale

The cashier's daily loop — fast, keyboard-friendly, mistake-proof

Register (POS)	Touch-friendly sales screen with category browsing, item modifiers, combo deals and per-branch pricing. Accepts multiple payment types in one bill — cash, card, <i>gift cards and loyalty points</i> — applies promo codes, and supports order holds. Opens from any page with one click or the “P” key. Faster queues, fewer billing errors, every tender type your customers expect.
Orders	Live order board with a disciplined status workflow (new sales are born “Preparing”; holds are kept separate) that stays perfectly in sync with the kitchen screen. Managers always know exactly what is cooking, ready, or delayed.
Kitchen Display (KDS)	A real-time screen for the kitchen: incoming orders appear instantly, staff mark items as prepared, and the front-of-house is notified the moment food is ready. No shouting, no paper chits lost — shorter ticket times.
Tables	Dine-in table management so servers can seat guests, attach orders to tables, and track occupancy. Smooth dine-in service and clear table turnover.
Bill History	A searchable archive of every invoice with printable/PDF bills, tied to the exact order, payments and taxes behind it. Instant answers for customer queries, refunds, and tax filing.

Automatic kitchen ticket printing (KOT). The moment a sale completes, kitchen order tickets print automatically on network thermal printers, routed **per station** — drinks to the bar printer, mains to the grill — with a browser-print fallback and one-click reprint. Printers are managed by admins in a simple screen.

Sales

Beyond the counter — quotes, dispatch and performance

Quotations

Prepare and send priced quotations for catering and corporate orders, then convert them when the client confirms.

Win larger, planned orders — not just walk-ins.

Delivery & Riders

Manage your delivery fleet: assign riders to orders and track delivery status through to hand-over.

Own your delivery channel without third-party commissions.

Shipments

Track outbound shipments for wholesale or inter-city orders from packing to delivery.

Visibility on every order that leaves the building.

Sell Returns

Process customer returns with the refund and the stock adjustment handled together, fully traceably.

Refunds that never silently leak money or stock.

Sales Targets

Set monthly targets per branch or team and watch actual performance tracked against them.

Turns sales into a managed, motivated activity.

Menu & Catalog

Everything the business sells, defined once, priced smartly

Menu Items	The heart of the catalog: items with photos, categories, availability control and <i>recipes linked to inventory ingredients</i>, so every sale knows its true cost. Real dish-level profitability, not guesswork.
Modifiers	Options and add-ons (size, extra shot, toppings) with their own pricing, attached to any item. Upsells captured cleanly on every ticket.
Combos	Bundle items into meal deals with special pricing. Higher average order value through packaged offers.
Brands & Units	Reference data for product brands and measurement units (kg, litre, pieces — including fractional stock quantities). Accurate purchasing and stock counting in real-world units.
Price Groups	Different price lists for different contexts — branches, channels, or customer segments. One menu, tuned pricing everywhere it sells.
Tax Groups	Configure tax rates once and apply them consistently across the catalog and billing. Compliant, consistent tax on every invoice.

Free bonus — QR digital menu. Every branch gets a public, read-only digital menu page reachable from a QR code on the table. Customers browse the live menu on their phones; you change it once in the catalog and it is instantly up to date.

Inventory

Know what you have, where it is, and where it went

Stock Items	Central stock register with quantities per branch, low-stock alerts on the dashboard, and support for fractional quantities (2.5 kg, 0.75 L). Never 86 a best-seller mid-shift because stock ran out silently.
Stock Transfers	Move stock between branches with a documented, two-sided transfer record. Branch-to-branch movement without disputes or losses.
Stock Adjustments	Record wastage, spillage, and count corrections with reasons — every change leaves a trail. Shrinkage becomes visible and manageable.
Production	Convert raw ingredients into prepared items (sauces, doughs, syrups) with stock moved automatically from inputs to outputs. Accurate costing for everything made in-house.

Purchasing

Suppliers and inbound goods, under control

Suppliers	A directory of your vendors with contact details and full purchase history per supplier. Negotiate from data — you know exactly what you buy from whom.
Purchases	Record purchase orders and goods received; stock and costs update automatically, and payables flow into Finance. Purchase costs land in stock and books without re-typing.
Purchase Returns	Return substandard goods to suppliers with stock and supplier balances corrected together. No more paying for goods you sent back.

Finance

The accountant's home — from daily takings to the trial balance

Financial Dashboard

A live picture of the business: revenue, expenses, profitability and trends across branches. Revenue figures come from actual invoices, so what you see is what you billed.

A truthful daily P&L pulse without waiting for month-end.

Reports

A library of operational and financial reports — sales by period/branch/item, taxes, attendance, stock — ready to review or export.

Every recurring management question answered in two clicks.

Accounting

A real double-entry general ledger. Sales, purchases, payroll, and even order cancellations post automatically to the correct accounts.

Books that are always current — your accountant reviews instead of re-enters.

Receivables & Payables

Track what customers owe you and what you owe suppliers, with aging and settlement recording.

Cash-flow control: collect on time, pay on time.

Budgets

Set spending budgets by category and monitor actuals against them.

Costs get a ceiling before they become a surprise.

Payment Accounts

Manage your cash drawers and bank accounts and see money movement per account.

Reconciling the till and the bank stops being a mystery.

Human Resources

From the duty roster to the salary slip

Staff	Complete employee profiles — role, branch, contact details, joining data — feeding every other HR module. One accurate source of truth for your team.
Attendance	Daily attendance with ten statuses including paid/sick/casual leave, work-from-home, holidays and overtime; public holidays are applied automatically. Payroll-ready attendance without a paper register.
Leave	Leave requests and approvals connected directly to attendance and payroll. Fair, documented leave — no verbal-agreement disputes.
Payroll	Monthly salary runs driven by attendance and salary policies, with safeguards built in (no invented salaries, no accidental future-month runs). Payroll posts to accounting automatically. Salary day takes minutes and matches the books to the rupee.
Salary Policies	Owner-defined rules for allowances, deductions and overtime that payroll applies consistently. Compensation is policy, not per-month improvisation.
Holidays	The company holiday calendar, reflected automatically in attendance. Everyone plans around the same calendar.
Departments	Organize staff into departments for structure and reporting. Clear org structure as the team grows.
Documents	Store employee documents — contracts, IDs, certificates — securely against each profile. HR paperwork findable in seconds, not filing cabinets.

Customers & Marketing

Turn first-time visitors into regulars

CRM	Customer profiles with contact details and full purchase history, built up automatically from sales. Know your regulars — and who stopped coming.
Loyalty	A points program where customers earn on purchases and redeem directly at the register as payment. A concrete reason to come back to you, not the café next door.
Gift Cards	Sell and redeem gift cards, with balances tracked and accepted as a tender at the POS. Cash up-front today, guaranteed future visits.
Promo Codes	Create discount campaigns with rules and validity windows, applied at checkout. Run promotions that are controlled, tracked, and end on time.
Card Partnerships	Configure bank-card discount deals (e.g. 20% with a partner bank's card) applied automatically at billing. Bank partnerships bring their customers to your counter.
Message Templates	Reusable SMS/notification templates, with an automatic background sender for customer messaging. Consistent, professional communication at scale.
Feedback	Collect and review customer feedback and ratings in one place. Hear about a bad experience from the system, not from a public review.

Workspace

Internal collaboration, inside the same system

Team Workspace	Shared documents, pinned memos, reminders and a knowledge base (recipes, SOPs, training material) for the whole team. Institutional knowledge survives staff turnover.
Messages	Built-in team messaging so operational chatter stays connected to the work. Shift coordination without leaking business data into personal apps.

Administration

Structure, devices, billing and system control

Branches	Create and manage locations; nearly every module is branch-aware — menus, stock, staff, reports. Expansion is a configuration task, not a software project.
Users & Roles	Owner-controlled accounts with a defined role catalog; deactivating a user locks them out instantly. Access control you can actually enforce.
Kitchen Printers	Register network thermal printers and assign them to kitchen stations for automatic ticket routing. The right ticket at the right station, every time.
POS & Receipts	Configure receipt layout, branding and register behavior. Receipts that look like your brand, not a generic till roll.
Checkout Settings	Fine-tune checkout rules — charges, rounding, and payment behavior. Billing policy set once, applied everywhere.
Plan & Billing	See your subscription plan and the features it enables. Pay for what you use; upgrade when you grow.
Branding	White-label the system with your logo and brand colors — the whole interface adopts your identity. Your staff work in <i>your</i> system, not a vendor's.
Setup Wizard & Demo Data	A guided first-run setup, plus one-click realistic demo data for training and evaluation. From empty system to trained staff, fast.
Notifications & Audit Logs	Real-time in-app notifications (low stock, orders ready, approvals) and a complete audit trail of every significant action. Nothing important goes unnoticed — or unrecorded.

4 A Premium, Modern Experience

- ✓ **ERP-grade navigation** — modules grouped by business domain in a collapsible sidebar that remembers how each user likes it; a first-time manager finds anything in seconds.
- ✓ **Instant search (Ctrl+K)** — a command palette that jumps to any module the user is allowed to see, in two keystrokes.
- ✓ **Keyboard-first operations** — “P” opens the register from anywhere, “N” starts a new record, “/” jumps to search.

- ✓ **Real-time everywhere** — kitchen screens, order boards and notifications update live, without refreshing.
- ✓ **English and Urdu (اردو)** — full bilingual interface with proper right-to-left layout; switch languages in one click.
- ✓ **Light and dark themes** — comfortable at the morning till and the midnight close alike.
- ✓ **Works on any device** — responsive layout for desktops at the counter, tablets in the kitchen, phones on the floor.

5 Security & Reliability

- ✓ **Role-based permissions** enforced on every action on the server — not just hidden buttons.
- ✓ **Complete audit trail** — logins, edits, payroll runs, cancellations and administrative changes are recorded with user, time and detail.
- ✓ **Strict data isolation** — built as a multi-tenant platform with automated tests proving one business can never see another's data.
- ✓ **Honest accounting** — cancellations reverse their ledger entries; revenue reports are built from issued invoices; payroll refuses invalid runs.
- ✓ **Proven technology** — Microsoft ASP.NET Core and SQL Server: mature, supported, and widely trusted in enterprise environments.

6 Seeing It Live

The fastest way to evaluate the system is a guided demonstration with realistic data — a full walkthrough of a working day takes about 45 minutes:

- ✓ Ring up a sale at the register and watch it hit the kitchen screen and printer instantly.
- ✓ Follow that same sale into stock deductions, the ledger, and the sales report.
- ✓ Run attendance and a payroll cycle for a sample team.
- ✓ Explore the owner's dashboard, budgets and audit trail.

We would be glad to schedule a live demonstration at your convenience, tailored to your branches, menu and workflows.
